

Good afternoon

I work for Scottish & Southern Electricity Networks. We are responsible for maintenance of the electricity network in your area.

I wanted to give you some advanced notice of some works that we have planned in for 1st August 2017.

We will be carrying out essential routine maintenance to replace assets on the overhead electricity network to ensure it remains resilient in the future.

Unfortunately we cannot safely carry out the work with the electricity live so we will be disconnecting the electricity on the above date between 9:00 – 17:00.

I have attached 2 maps which shows the area that is going to be affected (within the red boxes). We are able to attach a generator to the substation called Melbury Osmond however around 100 properties will be without a supply.

All residents who are going to be affected will receive the attached letter, we are aiming to deliver these at some point next week.

Each letter will have a point of contact for customers who have any concerns, we will be also be proactively contacting 27 customers affected who appear on our Priority Service Register to assess their needs & welfare for the duration on the shutdown.

If you require any further details on any of the above please do not hesitate to contact me either by e-mail or my phone number below.

Kind regards
